

Lexique Pro tutorial

Mahnaz Talebi¹

This tutorial explains how to use Lexique Pro to create a digital dictionary. It is intended for beginners who want to turn a list of words into a searchable and shareable dictionary. The tutorial covers data preparation, importing files, and exporting a web-based dictionary that can be published online.

1. Install Lexique Pro

Download and Install Lexique Pro on your computer.

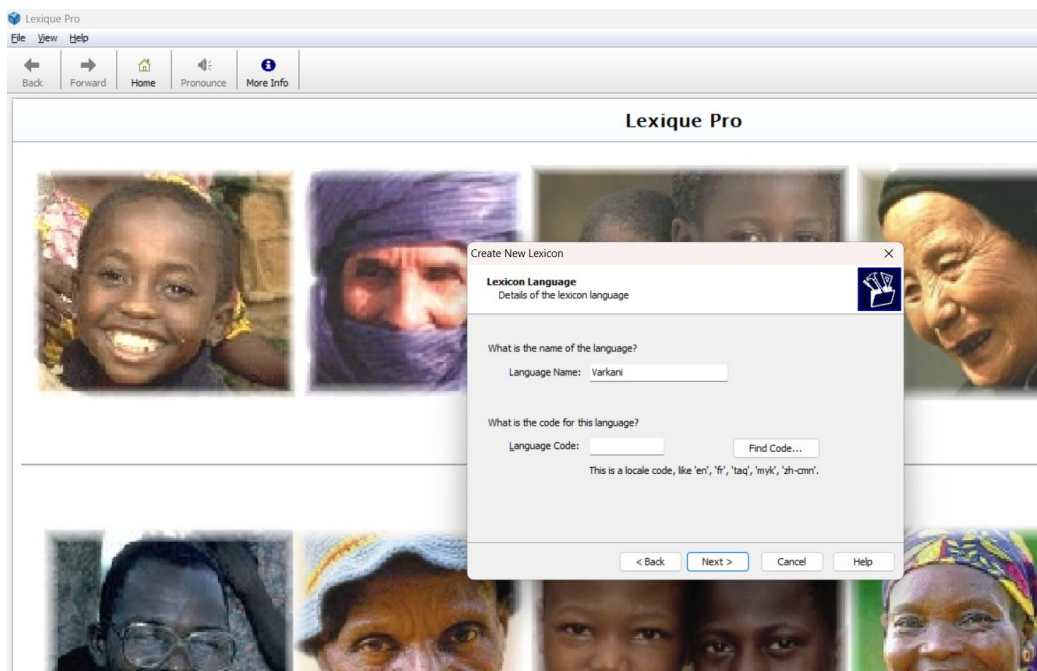

[Lexique Pro - Interactive Lexicon Viewer and Editor](#)

2. Create a New Lexicon

Open Lexique Pro and go to:

File → Create New Lexicon

This will start the setup wizard for creating your dictionary.

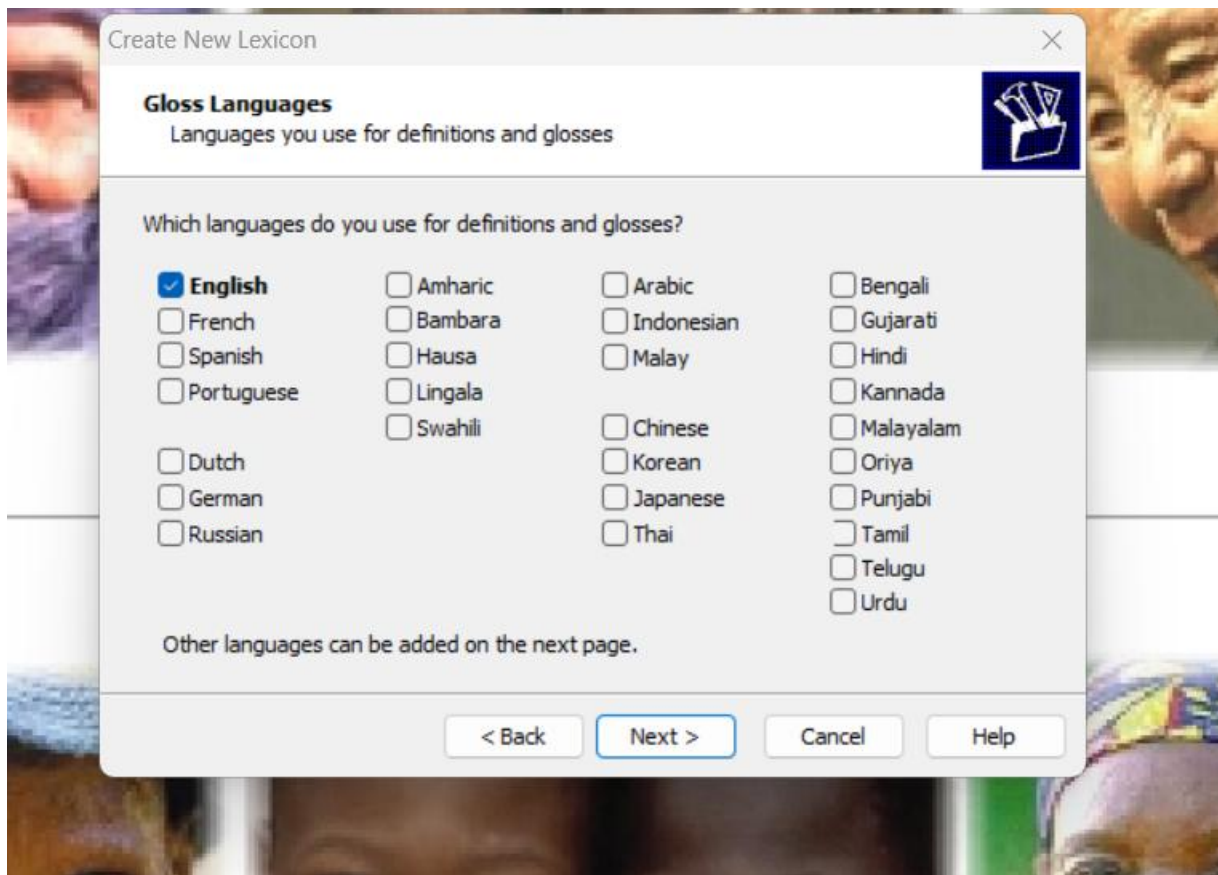

¹ PhD candidate in Linguistics, language documentation and Revitalization, Carleton University

3. Choose Languages

Select the languages you want to use for:

- **Definitions**
- **Glosses**

These are the main languages that will appear in your dictionary entries.

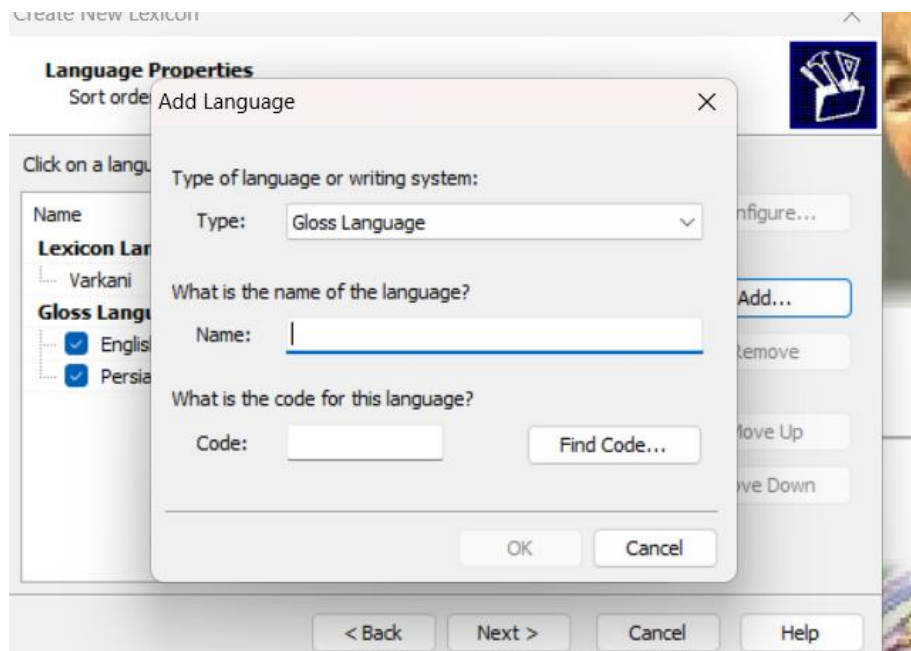

4. Add additional languages

If you need more languages:

- Go to the next page in the setup wizard
- Enter the name of the additional language

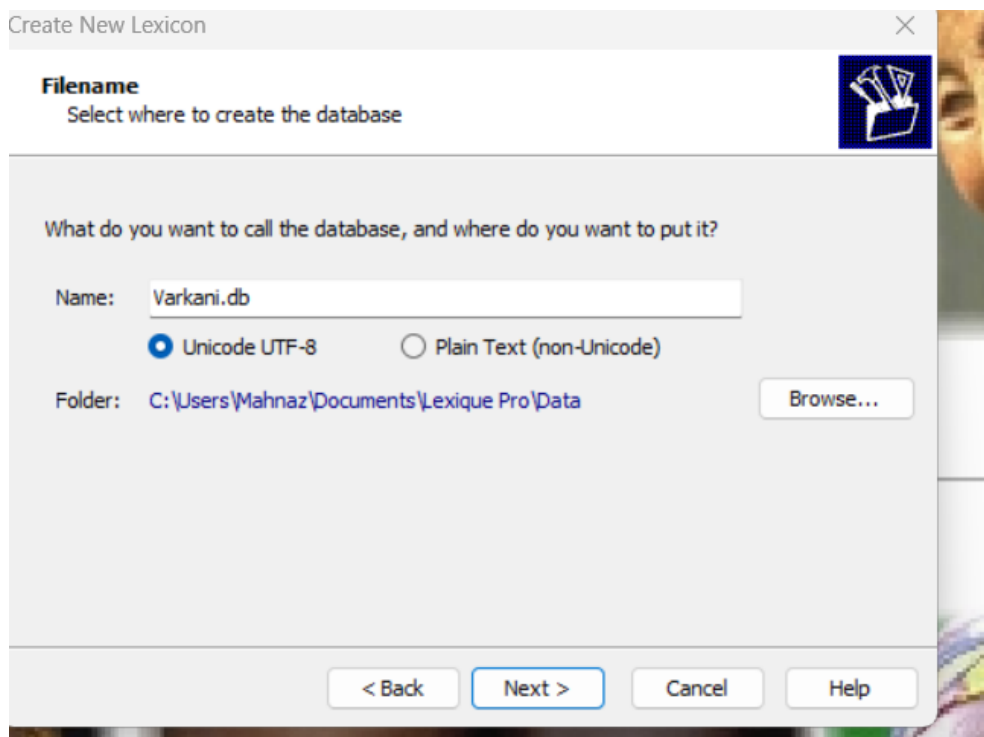

This is useful for multilingual dictionaries (e.g., Varkani–English–Persian).

5. Keep or modify default settings

You can keep the default settings unless you need specific customization.

Click **Finish** to save and create your lexicon.

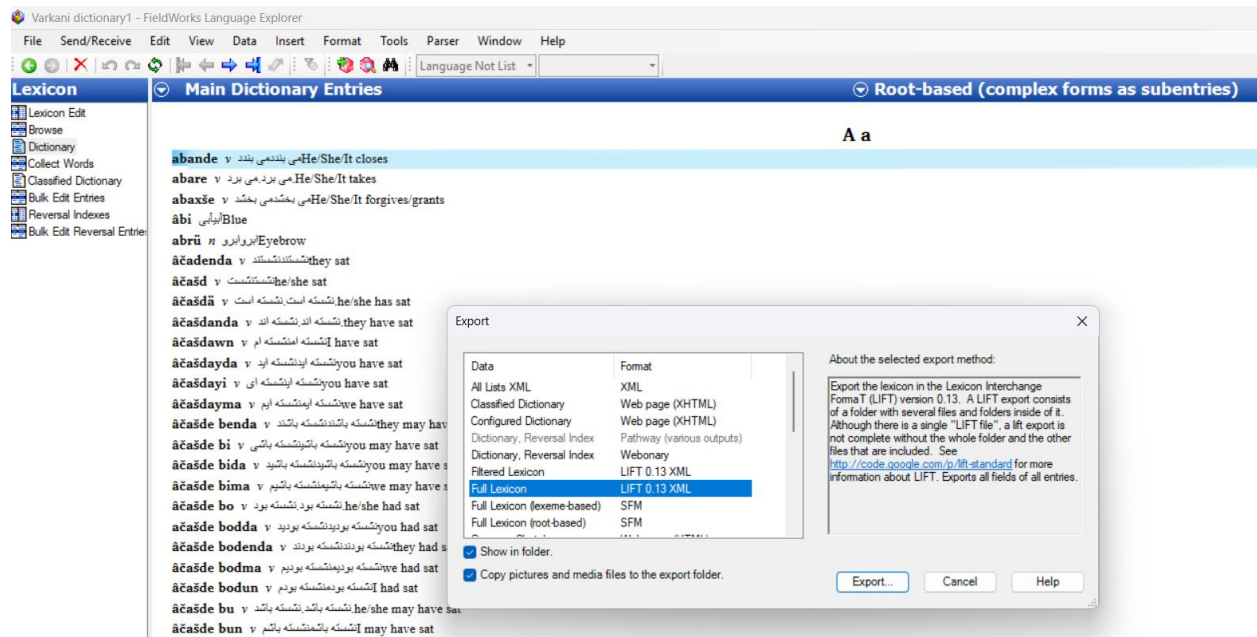

6. Working with FLEEx Data

If you are using FLEEx, you must export your data into a format that Lexique Pro can read.

Go to:

File → Export → LIFT format (.lift)

Lexique Pro supports the **LIFT format (XML-based)**.

7. Import Data into Lexique Pro

Open Lexique Pro and go to:

File → Open

Then:

- Select your exported .lift file
- Open it

Lexique Pro will launch the **Configure Lexicon Wizard**, which helps map your data fields correctly.

8. Configure Languages and Fields

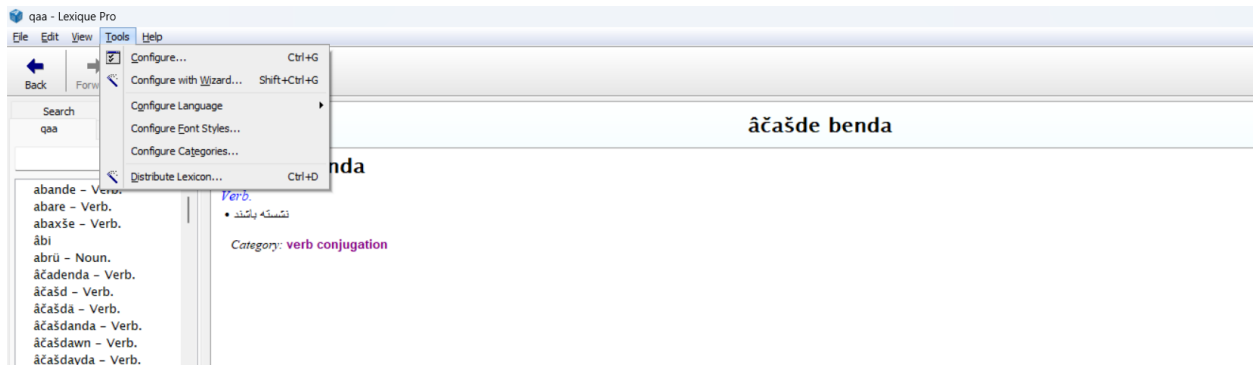

You can:

- Rename languages
- Adjust field mappings
- Modify how your data is structured

Go to:

Tools → Configure

to make these changes.

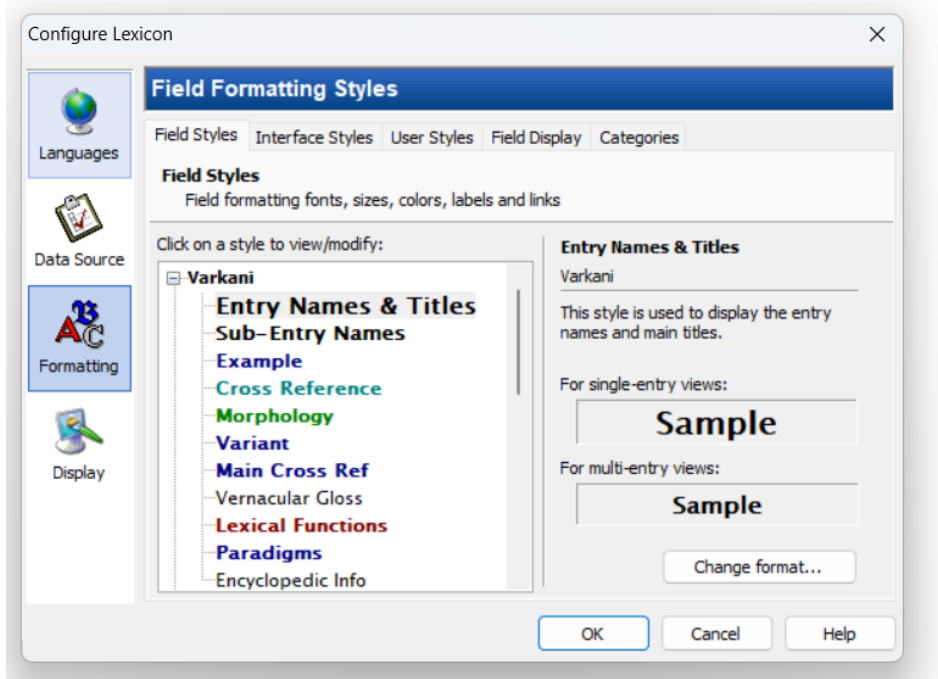

9. Format the Dictionary

In the **Formatting** section, you can control how entries appear, including:

- Layout
- Fonts
- Field order

This step is important for readability and presentation.

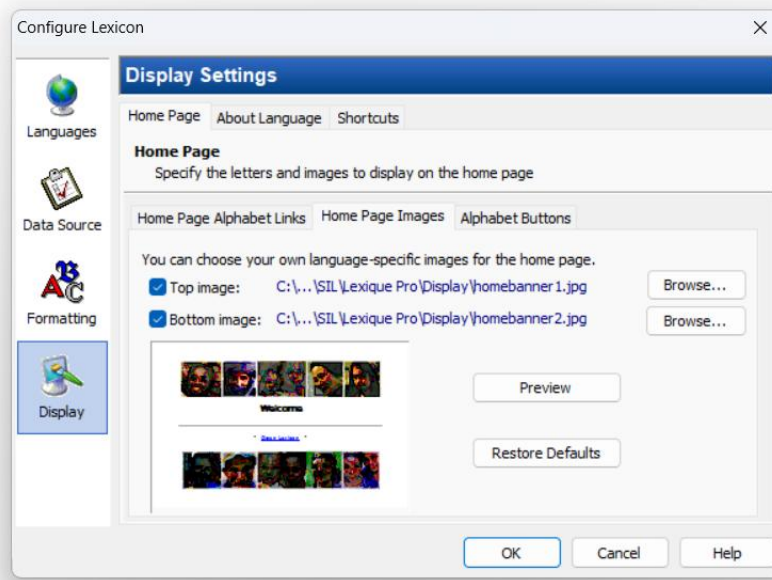

10. Customize the Home Page

To change the homepage image:

Go to:

Display → Home Page Images

Then select your preferred image.

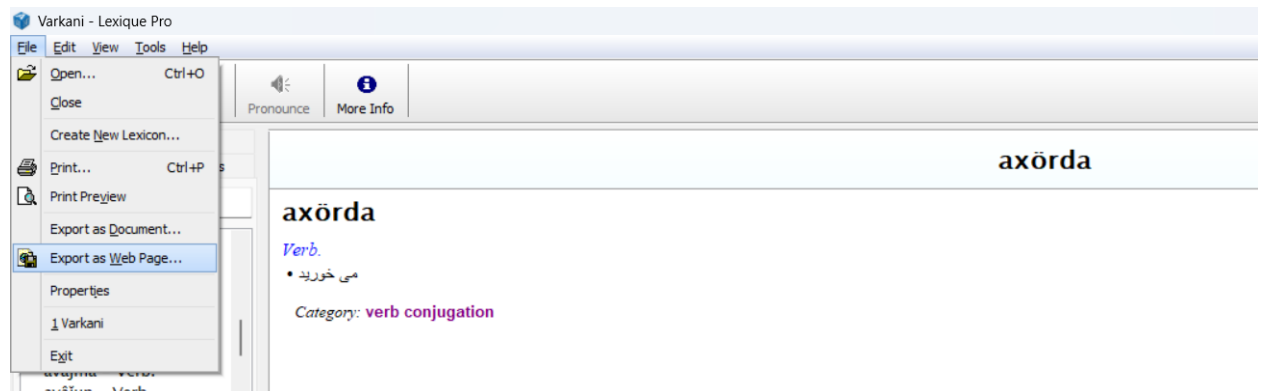

Exporting Your Dictionary as a Website

11. Create Web Pages

To export your dictionary for the web:

Go to:

File → Create Web Pages

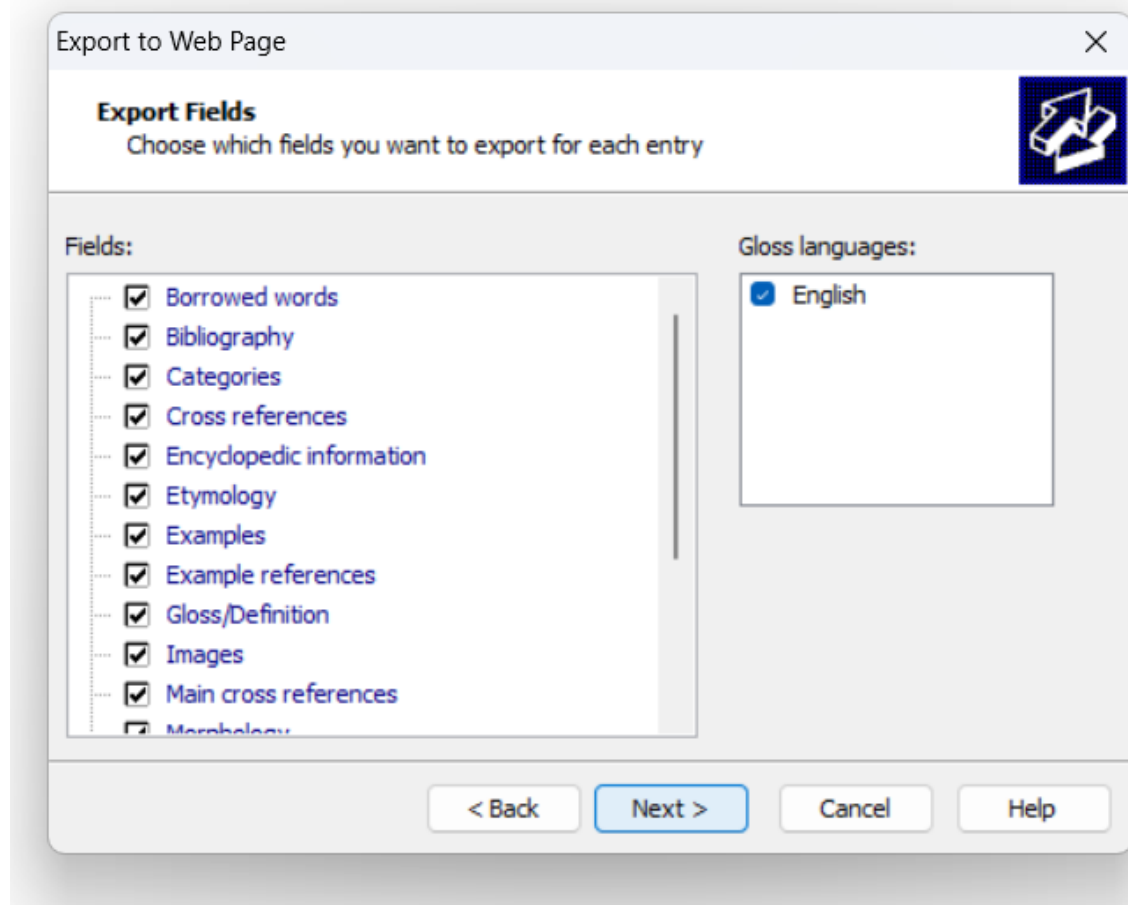

12. Follow Export Steps

Click **Next** and go through the export wizard.

You can configure:

- Output settings
- Layout options

13. Configure Images

If your entries include images, you can adjust how they are displayed and stored.

The screenshot shows the 'Export to Web Page' dialog box with the 'Pictures' tab selected. The title bar reads 'Export to Web Page'. Below the tab, the text 'Choose whether or not to include pictures' is displayed. The 'Picture Choice' section has four radio buttons: 'None: do not include any pictures', 'All pictures' (selected), 'Include only those whose database field contains the following text:', and 'Omit those whose database field contains the following text:'. Below these are two empty text input fields. The 'Allow the following image types:' section has checkboxes for '.jpg', '.gif', '.png', '.bmp', '.pcx', '.wmf', '.emf', and '.tiff', all of which are checked. The 'Picture Size' section has 'Width:' and 'Max. Height:' labels, each followed by a text box containing '300' and a 'pixels' unit label. The 'Picture Position' section has four radio buttons: 'Before entry', 'Before sense' (selected), 'After sense', and 'After entry'. At the bottom are four buttons: '< Back', 'Next >', 'Cancel', and 'Help'.

14. Configure Audio

If your dictionary includes audio (e.g., pronunciation), you can:

- Link audio files
- Adjust playback settings

The screenshot shows the 'Export to Web Page' dialog box with the 'Audio' tab selected. The title bar reads 'Export to Web Page'. Below the tab, the text 'Choose whether or not to include audio links' is displayed. The 'Audio Choice' section has four radio buttons: 'None: do not include any audio', 'All audio' (selected), 'Include only those whose filename contains the following text:', and 'Omit those whose filename contains the following text:'. Below these are two empty text input fields. The 'Allow the following audio types:' section has checkboxes for '.mp3' and '.wav', both of which are checked. The 'Type of hyperlink:' section has two radio buttons: 'Simple' and 'Audio player popup (using JavaScript)' (selected). At the bottom are four buttons: '< Back', 'Next >', 'Cancel', and 'Help'.

16. Customize the Home Page (Images and Display Settings)

To customize the appearance of your dictionary homepage, you can add images and adjust display settings.

Go to:

Tools → Configure → Display

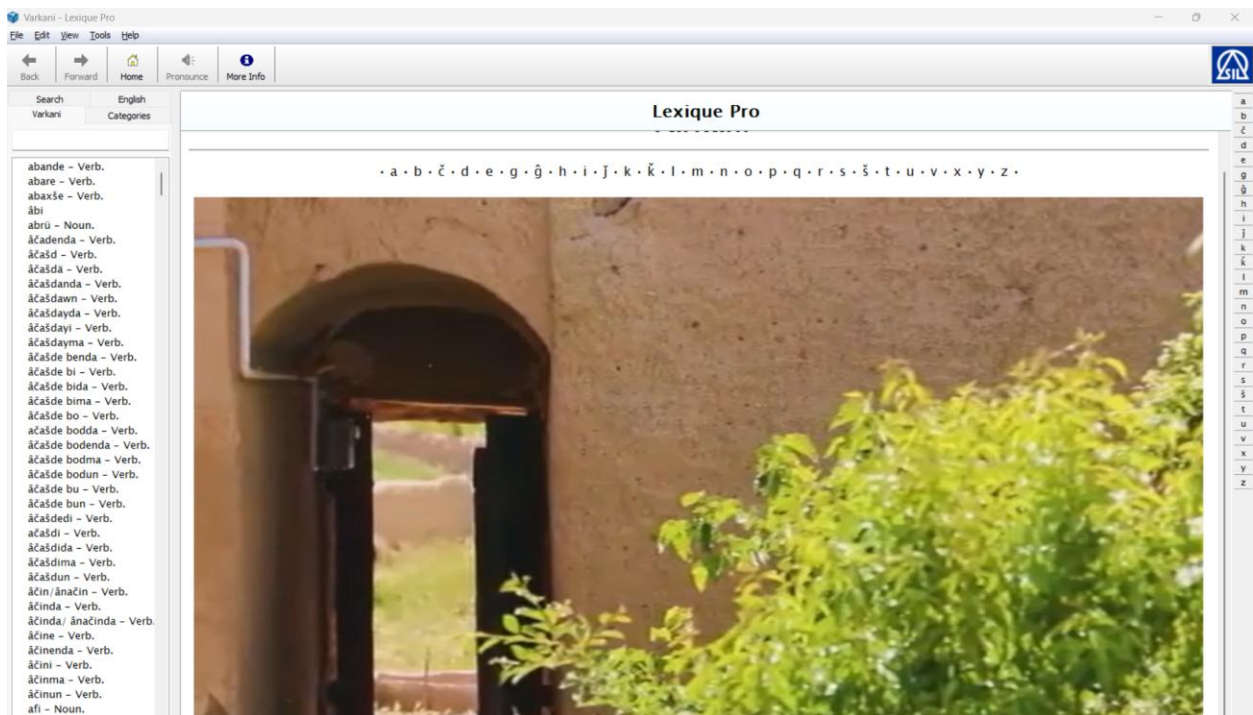

Then select the Home Page tab.

Adding Images to the Home Page

In the Home Page Images section, you can:

- Add a Top image (optional)
- Add a Bottom image (commonly used)

Click Browse... to select an image from your computer.

Uploading Your Lexique Pro Dictionary to GitHub

16. Prepare Your Files

After exporting, open the folder generated by Lexique Pro.

Go inside the final folder (often named something like your dictionary title, e.g., *Varkani Lexicon*).

You should see:

```
index.html
config.xml
/media
```

17. Fix the Folder Structure (VERY IMPORTANT)

Move all files out of nested folders so that index.html is at the top level.

Correct structure:

```
repository/
  index.html
  config.xml
  media/
```

Incorrect structure (common mistake):

```
repository/
  Web Pages/
    Varkani Lexicon/
      index.html
```

18. Create a GitHub Repository

1. Go to GitHub
2. Click New Repository
3. Name it (e.g., varkani-dictionary)
4. Click Create Repository

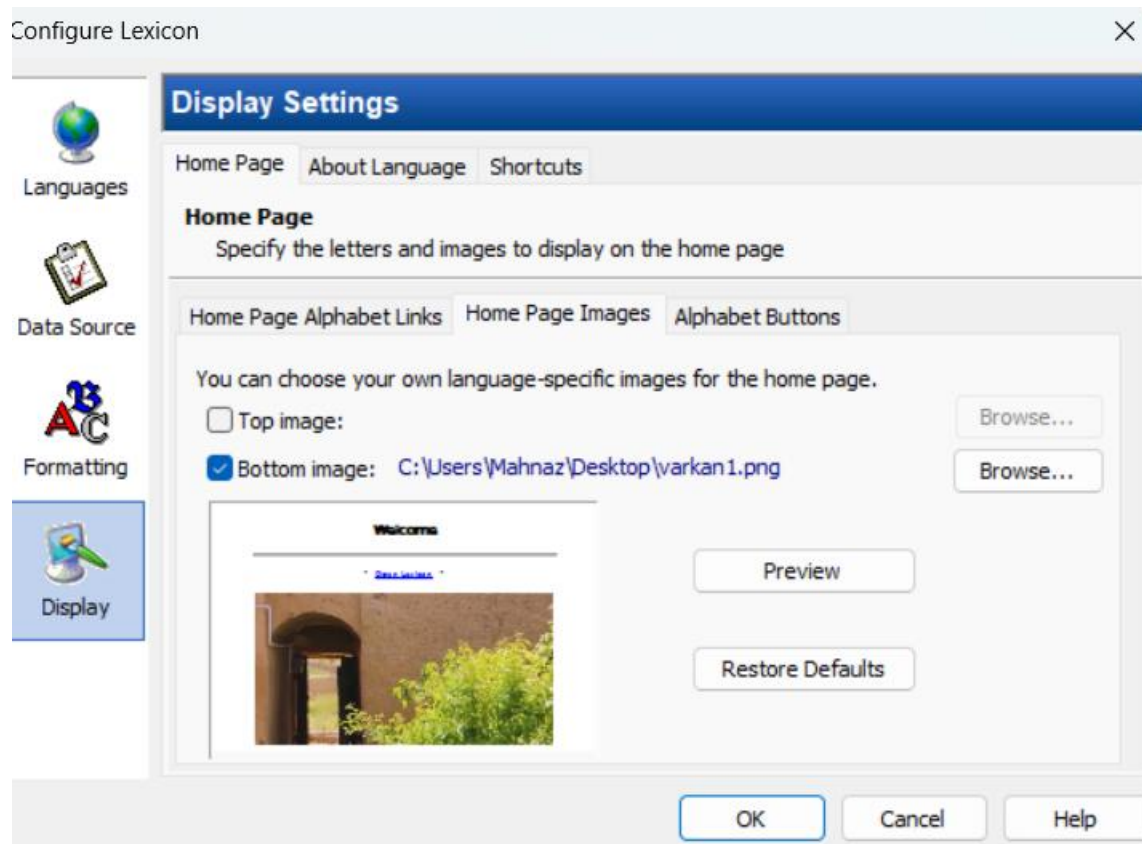

19. Upload Files to GitHub

1. Open your repository
2. Click Add file → Upload files
3. Upload:
 - index.html
 - all other files and folders
4. Click Commit changes

20. Enable GitHub Pages

1. Go to Settings
2. Click Pages
3. Under Source:
 - Select Deploy from branch
 - Choose main branch
 - Folder: /root
4. Click Save

21. Access Your Dictionary Online

Upload to GitHub

To publish your dictionary online:

1. Upload all generated files to your GitHub repository
2. Make sure:
 - index.html is in the **root (main folder)**
 - All related files (CSS, media) are included
